ANPR GATE CONTROL · MADE IN MUMBAI

Residents don't stop. Everyone else is recorded.

A camera reads the number plate. If the vehicle is on your register, the barrier opens by itself — nobody presses anything. Everything else goes to your guard, and every movement is written down.

Plate read to barrier open	Members still drive in	Languages at the gate	Works with your barrier

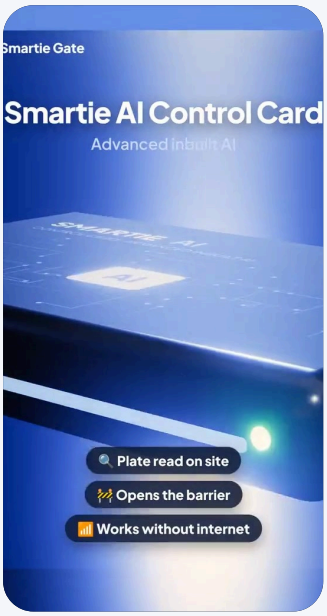

HOW IT WORKS

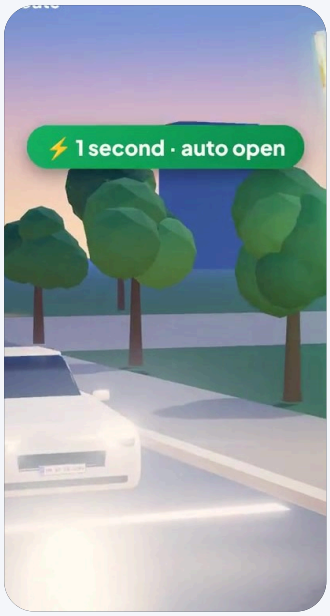

The plate is read at your gate, not somewhere far away

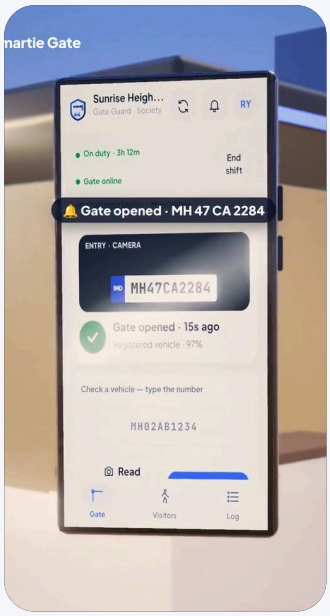

A Smartie AI Control Card sits in your gate cabin, next to the camera and the barrier. It reads every plate itself and opens the barrier in about a second — and keeps working when the internet doesn't.

Camera → **Smartie AI Control Card** → Boom barrier → App & records

1

The camera sees the plate

An ordinary 2–4 MP camera at the lane watches every vehicle, day and night — Indian plates, two-row bike plates and BH series.

2

The control card checks it

The Smartie AI Control Card reads the number and checks your register on the spot. Its AI also checks a real vehicle is at the gate.

3

Members go straight in

Registered vehicles: the barrier opens by itself in about a second. Anyone else goes to the guard's phone with Allow or Stop.

4

Everything is written down

Plate, time, gate, photograph and guard on duty — searchable in seconds, ready for Excel, impossible to back-date.

About one second

from the camera seeing the plate to the barrier being told to open. The plate is read at your gate, not sent away to be read somewhere else.

Indian plates · Two-row bike plates · BH series · Day & night · 2–4 MP camera

ADVANCED INBUILT AI · AT THE GATE

Smartie AI Control Card

The brain of the gate. It sits in your gate cabin, keeps a copy of your registered vehicles, reads every plate itself and tells the barrier to open. One card serves up to two lanes.

Plate read on site

The number is read by the card at your gate — no waiting on a server far away.

Opens the barrier

Connects to your boom barrier through its normal open input — the same one its push button uses.

Real vehicles only

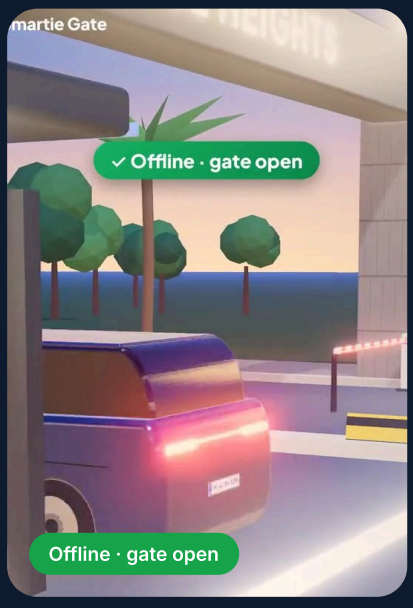

Its AI opens only for a real vehicle on your register. SECURE adds a vehicle sensor per lane.

Works without internet

Members keep driving in when the line is down. Records go up when it returns.

INTERNET OFF · GATE STILL RUNNING

What if the internet goes down?

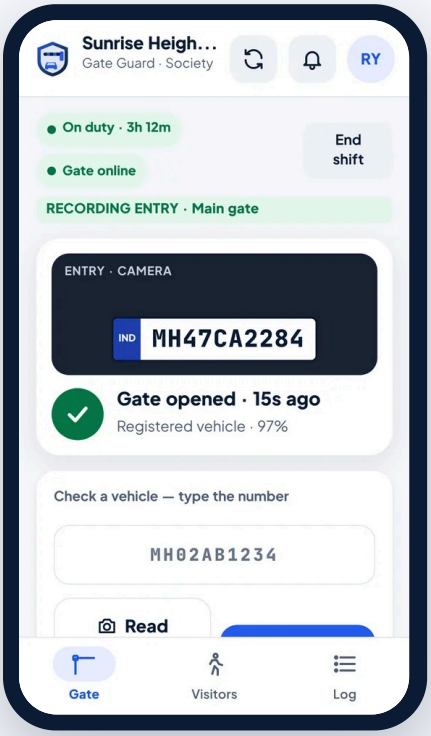

The control card at your gate keeps a copy of your registered vehicles, so members keep driving in. Gate records are kept on the card and sent up when the connection returns. The guard can always open the barrier by hand.

THE SMARTIE GATE APP

One app for the whole gate

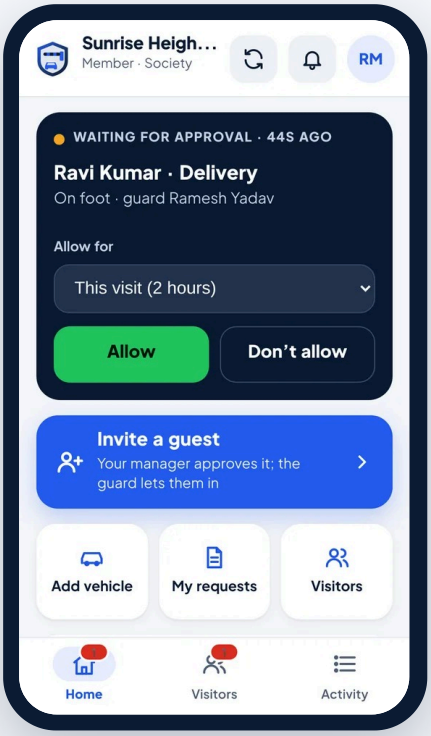

The guard, the residents and the manager open the same app and see only what they need — big, clear screens that work on an ordinary Android phone in a guard cabin at 2 am.

GUARD

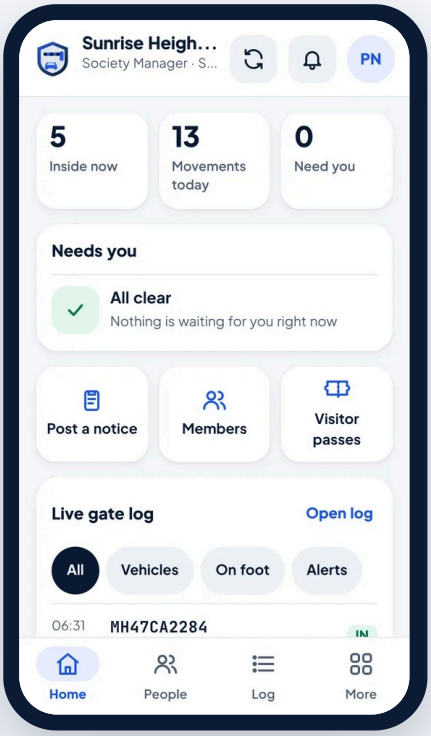

The barrier opens by itself for members; strangers come to his phone with **Allow** or **Stop**.

RESIDENT

The phone rings when someone comes for the flat — allow or decline from anywhere.

MANAGER & COMMITTEE

Who is inside right now, today's movements, dues and notices.

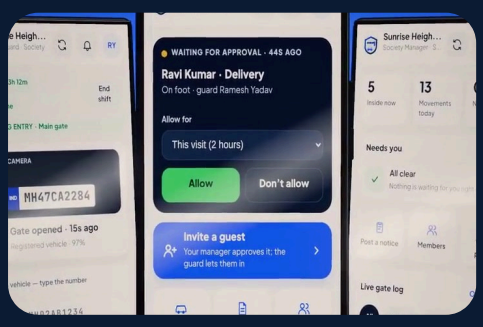

Seven languages at the gate

Hindi · Marathi · Gujarati · Tamil · Kannada · Punjabi · English

The verdict is also spoken aloud for the guard.

On every phone

Android app coming soon on Google Play. The same app works today in any phone browser at **app.smartiegate.com** — Android and iPhone.

Same app, same sign-in

Society, SiteGuard and Park run on the same app — each shows only what that gate uses. SiteGuard & Park add material in and out with photographs, parking tickets and collections.

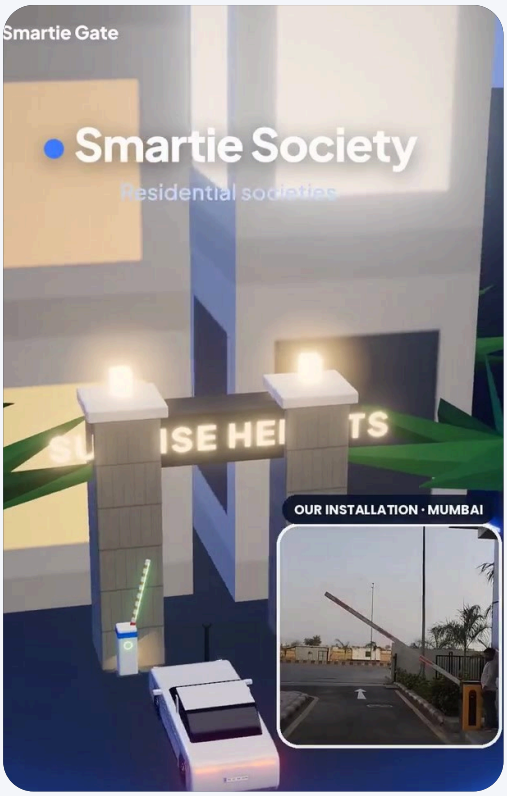

SMARTIE SOCIETY · HOUSING SOCIETIES

The gate stops being an argument

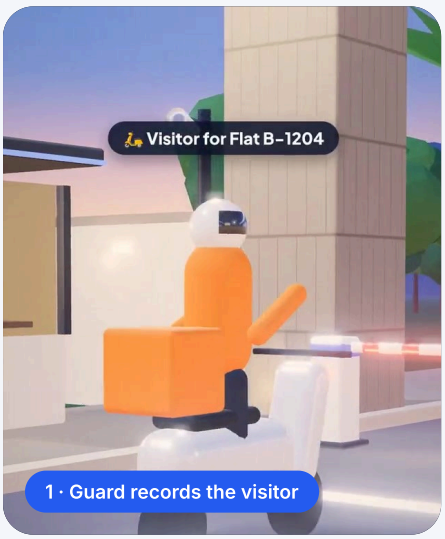

Residents drive through without stopping. Every visitor, delivery and helper is recorded with a photograph and approved by the flat they came to see — so nobody has to take the guard's word for it, and the guard never has to take theirs.

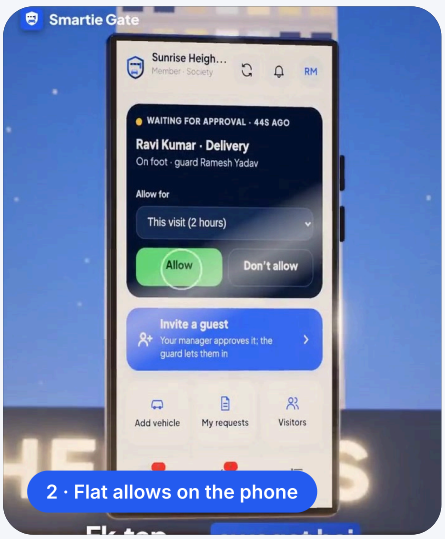

A register book proves nothing

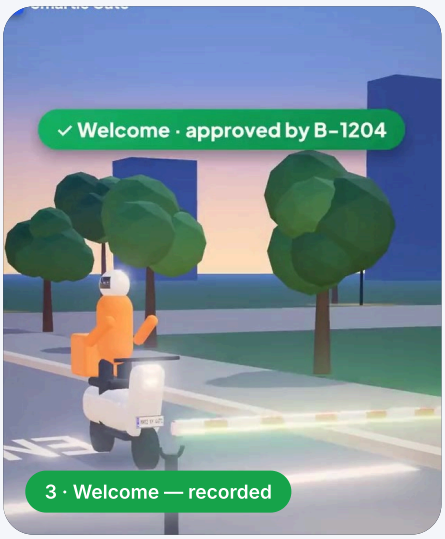

A visitor writes a name that may not be his and a flat he may have guessed; the guard fills in the time later. Weeks on, when something goes missing, the book answers none of it.

A VISITOR AT THE GATE

What the society gets

- **Members & vehicles** — no tag or sticker that can be lent
- **Visitor approval** from the flat, with a photograph
- **Daily help** — maids, drivers and tutors get a pass
- **Dues, fines & receipts** — nothing deleted, only waived
- **Notices** and the full gate register for the committee

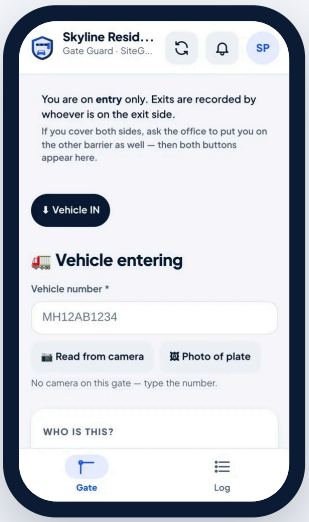

Who it suits

- Buildings of 40 flats to townships of 5,000
- Roles: Society Admin, Manager, Gate Guard, Resident
- An unknown plate is never refused automatically — the guard decides
- Works with the boom barrier you already have

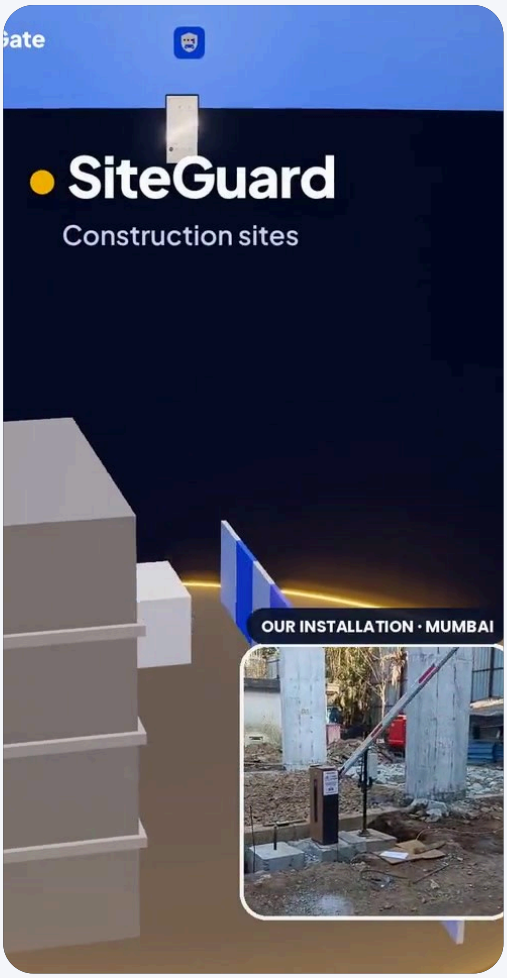

SMARTIE SITEGUARD · CONSTRUCTION SITES & WAREHOUSES

Nothing leaves the site without a photograph

For the gate where material leaves and nobody can later prove what was on the truck. Every movement carries photographs, and no guard can quietly change the record.

- **Material in & out** — what, how much, which firm sent it
- **Photographs** of the vehicle, plate, load and paperwork
- **Approved suppliers** and the people they send
- **Who is inside** right now — vehicles and people
- **Exit permission** — the guard's decision is recorded

WHAT THE GATE DOES WITH A TRUCK

1

Plate read

Approved supplier vehicles are recognised; unknown ones stop with the guard.

2

Load photographed

Vehicle, plate, load and paperwork are photographed at the gate.

3

Material recorded

Against the supplier, with who received it.

4

Exit is a decision

The guard allows on his name or asks the office — both recorded.

People on foot are a register too

Every person who walked in has to be walked out. Carried items are listed before they reach the road, and the live inside list shows who and what is still on the site.

Setup

Roles: Site Owner, Site Manager, Gate Guard. A camera per lane, the AI Control Card, the barrier and an Android phone at each gate — works on sites with unreliable internet.

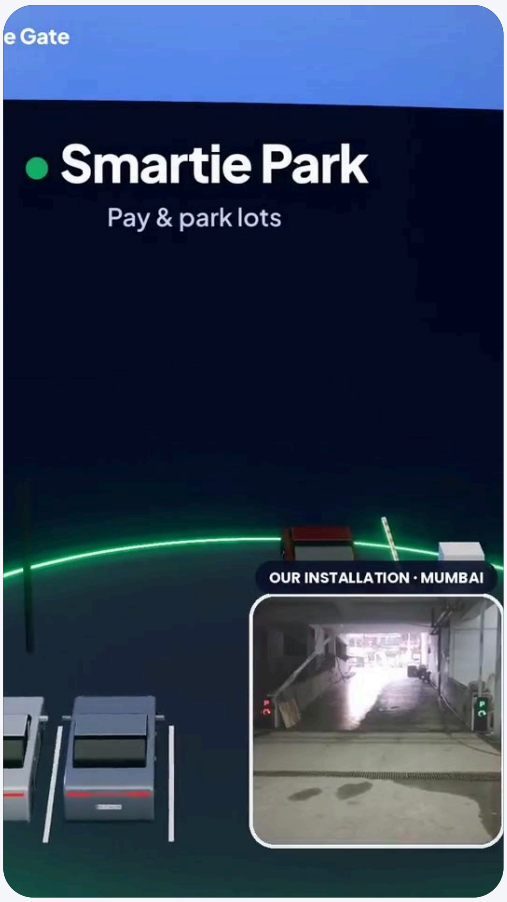

OUR INSTALLATION

Mumbai

SMARTIE PARK · PAID PARKING

The lot counts itself

Timed from the plate on the way in, charged on the way out, and the day's cash counted against what it should be — the same evening.

1

Plate starts the clock

Entry read timestamps the vehicle — no estimates.

2

Passes drive in

Monthly and season passes tied to the plate.

3

Fee at the exit

Hourly, daily or slab tariffs you set per lot.

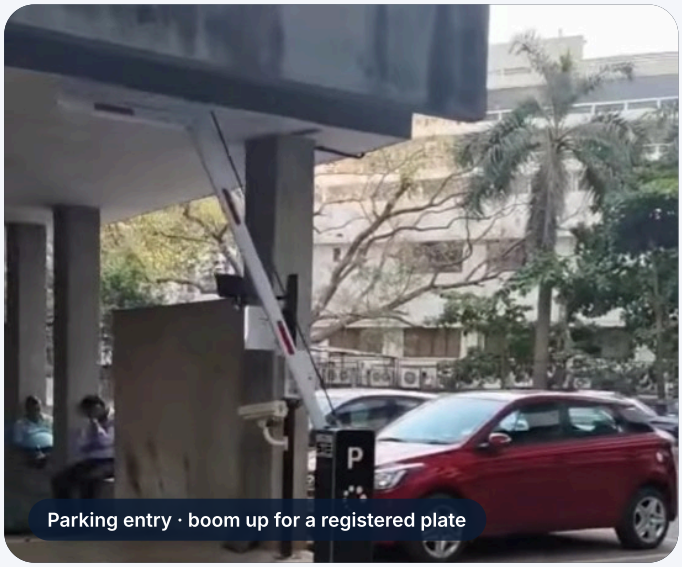

4

Collections counted

Per guard and per shift, against the tickets issued.

OUR INSTALLATION · MUMBAI

Running the lot

- Live occupancy from vehicles in and out
- Receipts, with UPI straight to your own account
- Daily and monthly reports, Excel export

Who it suits

- Commercial lots, malls, hospitals and stations
- Roles: Parking Owner, Parking Manager, Gate Guard
- Pay & Park module added to any package

WHAT YOU GET

Built for how an Indian gate actually runs

Works without internet

The card keeps your register; records go up when the line returns.

Real vehicles only

Opens only for a real vehicle on your register; every other entry is photographed.

Visitors & daily help

Guard records a visitor; the resident allows it from anywhere.

Night-ready

Camera tuned for plates after dark; SECURE adds an IR light per lane.

Every movement recorded

Plate, direction, gate, time, photo and guard — impossible to back-date.

Updates that never break a site

New versions go to a test gate first; a gate rolls back by itself.

Seven languages

Seven Indian languages at the gate, with the verdict spoken aloud.

Your data stays yours

One society can never see another's records. Export any time.

Dues, fines & receipts

Charges against a flat with who raised them — only waived, never deleted.

OUR INSTALLATIONS · MUMBAI

ANPR camera & SIE display pole

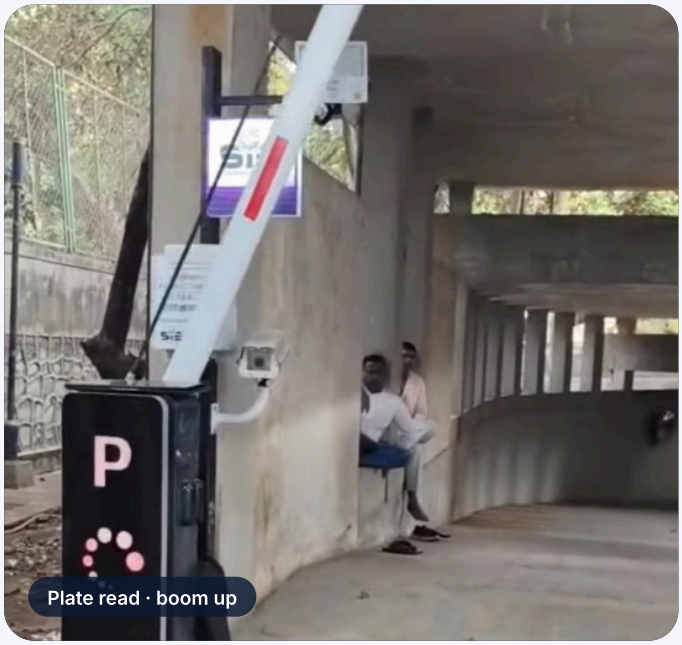

Plate read · boom up

Does this replace our security guard? No. It reads plates and keeps records. Someone still has to be at the gate to look at people and judge situations — the guard always has the last word.

BUY ONCE, OR RENT BY THE MONTH

Choose your package

Every package includes the Smartie AI Control Card, the camera, installation, the app for everyone, and the first year of software and support.

BASIC

One lane — your existing barrier

1 lane · 1 camera
